UPSTREAM OF SMITHLAND LOCKS AND DAM

REMOVAL OF BANK MATERIAL

OHIO RIVER MILE 918.2 RIGHT DESCENDING BANK (RDB)

1. Commencing on or about May 5, 2003, and continuing for approximately four weeks, Aquaterra Constructing Inc. will begin removing river bank material at Mile 918.2 (RDB), Ohio River. This material is located in front of the currently under construction Miter Gate Storage Area sheet pile bulkhead wall.
2. This material removal operation will be performed Monday through Saturday, from 7:00 a.m. to 6:00 p.m. local time. The contractor's equipment will consist of Poseidon sectional barges 40' x 50' with a hydraulic excavator and a push boat. The contractor can be contacted by marine radio on Channels 13 and 16. During non-working hours the equipment will be moored at the Smithland harbor.
3. Navigators should exercise extreme caution due to the close proximity to the upper approach of the lock chambers while transiting this area of the river.
